Water Quality Test	145.00
Markup on Materials and Product	25%
Multi-Job Discount-Up to \$50	10%
Cash Discount on Labor	10%
Credit Card Processing on Totals Over \$1000	4%

# Please Read and Sign Invoice

- Coupons, discounts, and multi-job pricing not applicable for any drain cleaning.
- 30 Day, 1 time only warranty MAY be given if piping is in proper working condition and up to code.
- A camera inspection is required for any warranty on sewer mains.
- Be advised that the objective in all basic drain cleaning is to re-gain flow ONLY. Basic drain cleaning is NOT intended to be a permanent solution. Basic drain cleaning very rarely cleans pipes completely. After drain cleaning is performed and/or a camera inspection is performed an estimate will be provided for a more comprehensive solution.
- All drain cleaning, rodding, and auger pricing is good for UP TO 1hr. After 1 hour a charge of \$205/hr. will be applied, and an option will be given for a re-pipe or repair. If re-pipe or repair is chosen, then the Initial drain cleaning charge is reduced by 50% with signed agreement and deposit.
- All piping in areas affected by a clogged drain is presumed to be in good condition, up to code, and can withstand normal drain cleaning equipment and procedures. A re-pipe or repair may be necessary before or after drain cleaning service and will be an additional cost.

# The New Standard in Drain Cleaning

To ensure that Keeleys Plumbing continues to provide the best value for our customers, we have joined many other plumbing companies in phasing out traditional drain cleaning tools and methods for clearing main sewer line blockages. Technological advances have not overlooked the plumbing industry. Sewer camera imaging is continuing to improve and “wire” type tools and methods are being replaced with water pressure.

What does that mean for you?

**Better Value!** - While water pressure drain cleaning may come at a higher initial cost than some homeowners are accustomed to, rest assured that hydro-jetting is a better long-term value.

Because of its wide, aggressive spray pattern, hydro-jetting is proven to eliminate up to 100% of blockages whereas older equipment has just cut a small hole in a larger clog. This means a better job and fewer plumber visits in the future saving you time, money, and the inconvenience of another back-up.

**Safety!** - Ridgid, steel cables have always been hazardous to plumbers, but as sewer pipes age the metal equipment can sometimes damage fragile clay and cast iron piping. Hydro-jetting gives us the ability to be as thorough as possible while also creating a safe working environment all while simultaneously monitoring the pipe's integrity as we work.

**Environmentally Friendly!** - Hydro-jetting uses no chemicals in its process. The only ingredient is water!

**No More Unsanitary Bulky Equipment in Your Home!** - Hydro-jetting equipment is versatile. The pumps and motors stay outside and the plumber only needs a small hose and camera.

Pricing Structure:

1st Hour/Minimum-	<b>\$720.00</b>
Each Additional Hour	<b>\$620.00</b>

Additional Charges May Apply.

# Drain Cleaning

Hydro-jetting service (Up to 2 hours)	1265.00
Hydro-jetting service (Each additional hour)	310.00
Hydro-jetting service 3" lines or smaller (Up to 2 hours)	865.00
Hydro-jetting service (Each additional hour)	230.00
Cable sewer main through accessible cleanout	425.00
Manually remove blockage from sewage pump	425.00
Cable 2-4" drain through cleanout or floor drain	365.00
Vacuum floor drain only	210.00
Cable toilet with closet auger	280.00
Cable toilet by removing and resetting (no machine)	435.00
Cable sewer main by pulling and resetting toilet up to 75'	665.00
Manually remove blockage from garbage disposal	185.00
Individual fixture drain cleaning with / 1/4" machine	280.00
Individual fixture drain cleaning with / 1/2" machine	365.00
Cable lavatory drain with p-trap replacement	385.00
Cable tub drain by removing and replacing drum trap cap	555.00
Chemical treatment	285.00
Add on chemical treatment	+115.00

Perform video inspection by removing toilet (up to one hour)	430.00
Add on video inspection	+135.00
Add on drain cleaning (1/4" cable)	+145.00
Add on drain cleaning (3/8" cable)	+215.00

# Sewer Gas Smell

Sewer gas inside the home is usually a combination of methane, ammonia, and hydrogen sulfide. In small amounts the smell is harmless but can get toxic when the gas reaches extremely large amounts of 150 PPM or greater.

Getting rid of a sewer gas smell in your home can be a small DIY fix or a sign that there is a much larger problem.

The best way to tell if it is a small, DIY project is to add plenty of water to EVERY drain in the house. To further ensure the trap seal doesn't evaporate you can add some mineral oil to the drain along with the water.

This includes:

**Both basins of kitchen sinks**

**Both basins of laundry tubs**

**Floor drains in basements and laundry rooms (Sometimes located under the washing machine)**

**Seldom used fixtures like whirlpool tubs**

**Bar sinks**

There are several other common causes for a sewer gas smell that may require more skill.

This includes:

**Dirty tub/shower drains/laundry drains**

**Broken wax seal on 1 or more toilets**

**Full or backed up catch basin**

**Clogged sewer**

**Unsealed/dirty sewage pit**

Many times, a sewer gas smell can be a sign that there is a broken pipe somewhere in the house. From a broken sewer line under the concrete floor to a separated vent stack in the attic.

If the DIY solutions do not provide any results, we always recommend a smoke test as the next step.

A smoke test is simple but time-consuming process that involves pumping your homes sewer system with large amounts of harmless smoke. The smoke fills the sewer and venting system. Any breaches in the system will then become visible to the plumbers performing the test and then a diagnosis can be made, and repairs can begin.

<b>Service fee to perform visual inspection of homes drains and exposed venting</b>	<b>\$165</b>
<b>Perform smoke test</b>	<b>\$1350</b>

# Leak Inspection

Please Read

A leak inspection is required ANY time there is a leak coming from a ceiling or a wall, and there is no visible, active leak coming from above. Keeley's Plumbing needs to be sure where the leak is coming from before a diagnosis is given and any repair is performed. The following is what you can expect.

1. Leak inspection fee of \$290.00 per leak will be applied.
2. Expose walls/ceilings to investigate leak and diagnose the problem. Flat rate for 1-100 holes.
3. A price will be given for the repair.
4. If agreed upon, the initial cost will be reduced by 50% (\$145.00) and the repair will be completed and tested.
5. If not agreed upon, or if NO PLUMBING LEAK IS FOUND, the \$290.00 balance is due, and an estimate will be left behind.
6. Area will be broom swept cleaned after work is completed.
7. Keeley's Plumbing is not responsible for wall repair.
